

Voice Command — SOP

How this module works

One box that takes you where you want to go. Type or speak a command in plain language — English, Hindi or Gujarati — and it opens the right screen. Common commands are matched instantly from a built-in list; only unusual wording is sent to AI.

SECTIONS

● Command Box Type a command and press Enter, or click Go. The result shows where it will take you, with a countdown you can cancel.	● Microphone Speak instead of typing. Pick English,  or  first — the language buttons set what the microphone listens for. Chrome only.
● Example Commands Ready-made commands you can click to fill the box. They change with the language you picked.	● Recent Commands The last commands run on this account, with a link to jump straight back to where each one went.
● All Commands The full list of what you can ask for, grouped by area. Click any one to load it into the box.	

STEP-BY-STEP WORKFLOW

- 1 Press Alt+V from anywhere in VELTRIX OS to open this page.
- 2 Type a command, or click the microphone and say it. Example: 'Show HOT leads'.
- 3 Read the result line — it tells you exactly which screen it understood.
- 4 It moves there on its own after a short countdown. Press Cancel or Esc if that is not what you meant.
- 5 If it says it did not understand, rephrase using one of the example commands as a guide.

CONNECTIONS

●  Leads Commands about leads open the Leads list, the Hot filter, the pipeline view or the new-lead form — the same screens the sidebar opens, so nothing is duplicated here.	●  Invoice Invoice commands open the invoice list or the new-invoice form directly, saving a trip through the menu.
●  Follow-up, Nurture, Team, Expenses, Sales Report, AI CFO, WhatsApp Engine, Settings Each has a command that opens it. This page only navigates — it never creates, edits or deletes anything in those modules.	●  Settings — Claude API key Only needed for unusual wording. Everyday commands are matched from a built-in list and work even when AI is unavailable.

● **Keyboard shortcuts**

Alt+V opens this page from anywhere. It is listed with the other shortcuts under ⌘?
